Experience

Applied AI Engineer Intern May 2026 – July 2026
Xmplar Management Solution *Bengaluru, Karnataka*

- Developed AI-assisted reconciliation workflows using semantic similarity, LLM inference, and deterministic verification for heterogeneous ERP and financial datasets.
- Built schema inference, data ingestion, normalization, and record-linkage pipelines for structured and semi-structured financial spreadsheets.
- Engineered validation and reconciliation analytics with automated KPI computation and Excel report generation.
- **Tech Stack:** *Python, LLM Inference, Semantic Similarity, Data Processing, FastAPI, Pandas, OpenPyXL, Git*

Full Stack Intern May. 2025 – July 2025
Adiyen Technologies *Bengaluru, Karnataka*

- Built reusable Angular 17/TypeScript components for interactive, data-driven applications.
- Developed event-driven synchronization using WebSockets and RxJS to maintain consistent application state across concurrent clients.
- Integrated serverless services with AWS Lambda and API Gateway, and automated CI/CD using AWS Amplify and CodePipeline.
- **Tech Stack:** *Angular 17, TypeScript, WebSockets, RxJS, AWS Lambda, API Gateway, Amplify, CodePipeline, Git*

Technical Skills

Languages: Python, SQL, C, R
Databases: PostgreSQL
Data Analysis: Power BI, Tableau, Pandas, NumPy, Matplotlib
Machine Learning: Scikit-learn, PyTorch, TensorFlow
NLP: Transformer-based Models, SentenceTransformers (semantic similarity, embedding-based retrieval)
Frameworks & Tools: Hugging Face, FastAPI, Docker, Git

Education

Vellore Institute of Technology Mar. 2023 – May 2027
B.Tech in Computer and Business Systems *Vellore, Tamil Nadu*

- **CGPA:** 7.0 / 10.0
- **Relevant Coursework:** Probability and Statistics, Discrete Mathematics, Data Structures and Algorithms

Projects

Customer Support NLP Pipeline | *SentenceTransformers, Cosine Similarity, Multi-task Learning*

- Designed semantic similarity pipeline using SentenceTransformers for intent matching and response retrieval
- Built multi-class and multi-label classification system for handling diverse customer queries
- Created unified embedding space enabling both predictive and retrieval-based workflows

AI-Powered Invoice Reconciliation System | *Python, Mistral, Qwen, Tesseract, Vector Search, ollama*

- Developed NLP and local-LLM pipeline to extract and verify structured information from receipts, invoices, and expense documents
- Built vendor entity-resolution and retrieval system using vendor profiles, OCR variations, GSTIN, and historical invoice data for robust ERP record matching
- Automated ERP reconciliation and discrepancy detection across vendor, quantity, pricing, GST/CGST, and other invoice fields with Excel report generation using OpenPyXL

Achievements

IBM Certified Generative AI Engineer

Top 10 Finalist at the National Space Hackathon 2025 (IIT Delhi & ISRO)

- Led the design and implementation of Python-based algorithms for cargo placement and transportation, utilizing spatial indexing and optimization techniques to enhance storage efficiency and retrieval operations for space stations.
